As the linguistic, cognitive and social elements of our lives are transformed by new and emerging technologies, educational settings are also challenged to respond to the issues that have arisen as a consequence. This book focuses on that challenge: using psychological theory as a lens to highlight the positive uses of new technologies in relationships and educational settings, and to advocate technological learning opportunities and social support where the misuse and abuse of ICT occurs. The Impact of Technology on Relationships in Educational Settings sets out to explore the role of ICTs in relationship forming, social networking and social relationships within our schools and has grown out of the European Cooperation in Science and Technology (COST); Action on cyberbullying, involving 28 participating countries, and two non-COST countries, of which Australia is one. This cutting edge international text offers cross-cultural, psychological perspectives on the positive uses of new and emerging technologies to improve social relationships and examples of best practice to prevent virtual bullying. This comes at a time when much of the focus in current writings has been on the more negative aspects which have emerged as new technologies evolved: cyberbullying, cyber-aggression and cybersafety concerns. This text is ideally suited to researchers and practitioners in the fields of Educational and developmental psychology, as well as those specialising in educational technology and the sociology of education.

Ensuring online safety has become a topic on the regulatory agenda in many Western societies. However, regulating for online safety is far from easy, due to the wide variety of national and

international, private and public actors and stakeholders that are involved. When regulating online risks for children it is important to strike the right balance between protection against harms on the one hand and safeguarding their fundamental freedoms and rights on the other. The authors in this book attempt to grapple with precisely this theme: striking the right balance between ensuring safety for children on the internet while at the same time enabling them to experiment, to learn, to enrich their lives, to acquire skills and to have fun using this global network. The authors come from various scientific disciplines, ranging from law to social science and from media studies to philosophy. This means that the book provides the reader with both empirical and theoretical/conceptual chapters and sheds a multi-disciplinary light on the complex topic of regulating online safety for children.
