The 3D Angiographic Atlas of Neurovascular Anatomy and Pathology is the first atlas to present neurovascular information

and images based on catheter 3D rotational angiographic studies. The images in this book are the culmination of work done by Neil M. Borden over several years using one of the first 3D neurovascular angiographic suites in the United States. With the aid of this revolutionary technology, Dr Borden has performed numerous diagnostic neurovascular angiographic studies as well as endovascular neurosurgical procedures. The spectacular 3D images he obtained are

extensively labeled and juxtaposed with conventional 2D angiograms for orientation and comparison. Anatomical color drawings and concise descriptions of the major intracranial vascular territories further enhance understanding of the complex cerebral vasculature.

Illustrated with over 1,300 multi-modality images. *Vascular and Interventional Radiology* Mosby Incorporated Neurology is an exciting and evolving clinical science. The fact that many previously untreatable diseases are

now known to be not only treatable, but preventable, has raised new optimism for the probability that treatments will emerge for other currently incurable neurologic disorders. This book is written and illustrated for students of clinical Neuroradiology: The Requisites Elsevier Health Sciences Similar to the first edition, the goal of Mayo Clinic Gastrointestinal Imaging Review, 2nd Edition is to provide an atlas of common abnormalities

that affect the gastrointestinal tract. This comprehensive review includes all imaging modalities used within GI radiology, as well as plain radiographs, fluoroscopy, ultrasound, CT, MR, angiography, and nuclear medicine. Focusing solely on adult conditions, the book is divided into 13 chapters covering a separate organ within the gastrointestinal system and a final exam chapter reviewing all chapter content. Each organ-focused chapter is subdivided into sections

related to diseases or findings of that organ. Running headers allow the reader to rapidly identify the chapter and the section being viewed. Large, high-quality images are presented in a format so that they can be reviewed as unknowns. A discussion of the cases is presented as if it were a consultation-- with a description of the findings, differential diagnosis, and final diagnosis. A brief discussion of the disease is included. Emphasis is placed on brevity of the

text and a single-page layout for all but a few cases. Study guides at the end of each section are in the form of tables summarizing major radiographic findings into differential considerations with brief imaging clues to a specific diagnosis and case references within the book. The end of each chapter lists differential diagnoses for the chapter's specific organ. Full-color composite anatomical illustrations show the immediately obvious appearance of common conditions that

correlate with major radiologic findings.

classification of CNS neoplasms. Presents new insights on autoimmune encephalitis, noninfectious CNS inflammation, and brain microbleeds, including critical-illness-associated microbleeds. *Practical Approach to Electroencephalography E-Book*. Elsevier Health Sciences. Neurointervention is a fast-growing subspecialty, and recent trials have demonstrated its role in ischaemic and haemorrhagic stroke. This has generated

tremendous interest among interventional neuroradiology, neurology and neurosurgery communities. Nevertheless, formal teaching programmes that provide the required experience are limited, and many early career practitioners are not exposed to the crucial technical details essential to safely performing the procedure before they start practising independently. The book presents 100 characteristic case studies to illustrate the salient

technical and clinical issues in decision-making and problem solving during the procedure. This book conveys the “real-world” issues and solutions that are not addressed in detail in most books. As such it is a practical teaching book with useful “tips and tricks” on how to handle specific challenging situations, and is particularly useful for fellows in neurointervention training programmes..
