This work explores the history of life-extensionism in the 20th century. The term life-extensionism is meant to describe an ideological system professing that radical life extension (far beyond the present life expectancy) is desirable on ethical grounds and is possible to achieve through conscious scientific efforts. This work examines major lines of life-extensionist thought, in chronological

order, over the course of the 20th century, while focusing on central seminal works representative of each trend and period, by such authors as Elie Metchnikoff, Bernard Shaw, Alexis Carrel, Alexander Bogomolets and others. Their works are considered in their social and intellectual context, as parts of a larger contemporary social and ideological discourse, associated with major political upheavals and social and economic patterns. The following national contexts are considered: France (Chapter One), Germany, Austria, Romania and Switzerland (Chapter Two), Russia (Chapter Three), the US and UK

(Chapter Four). This work pursues three major aims. The first is to attempt to identify and trace throughout the century several generic biomedical methods whose development or applications were associated with radical hopes for life-extension. Beyond mere hopefulness, this work argues, the desire to radically prolong human life often constituted a formidable, though hardly ever acknowledged, motivation for biomedical research and discovery. It will be shown that novel fields of biomedical science often had their origin in far-reaching pursuits of radical life extension. The

dynamic dichotomy between reductionist and holistic methods will be emphasized. The second goal is to investigate the ideological and socio-economic backgrounds of the proponents of radical life extension, in order to determine how ideology and economic conditions motivated the life-extensionists and how it affected the science they pursued. For that purpose, the biographies and key writings of several prominent longevity advocates are studied. Their specific ideological premises (attitudes toward religion and progress, pessimism or optimism regarding human perfectibility, and ethical imperatives) as well as their socioeconomic conditions (the ability to conduct and disseminate research in a specific social or economic milieu) are examined in an attempt to find out what conditions have encouraged or discouraged life-extensionist thought. This research argues for the inherent adjustability of life-extensionism, as a particular form of scientific enterprise, to particular prevalent state ideologies. The third, more general, aim is to collect a broad register of life-extensionist works, and, based on that register, to establish

common traits and goals definitive of life-extensionism, such as valuation of life and constancy, despite all the diversity of methods and ideologies professed. This work will contribute to the understanding of extreme expectations associated with biomedical progress that have been scarcely investigated by biomedical history.

Dietary supplements made from foods, herbs and their constituents are a rapidly growing market sector. Consumers often view food supplements as 'natural' and therefore safe; however, supplements are regulated as foods rather than as pharmaceuticals and so are not as closely monitored as may be necessary. With the commercial market in these products growing, this book provides essential research into their safety, efficacy and potential risk of interaction with pharmaceuticals. Following an introductory chapter, part one covers the chemical composition, manufacture and regulation of dietary supplements. Part two looks at the effectiveness of different types of dietary supplement and methods

of evaluation. Finally, part three focuses on supplement safety. Reviews the design, production and regulation of dietary supplements. Analyses the potential for pharmacokinetic and pharmacodynamics interactions between dietary supplements and pharmaceuticals. Offers reviews of important clinical studies on the efficacy of dietary supplements for range of conditions.

The author encourages readers to be more optimistic about their bodies; he says you don't have to get weaker and fatter as you age. Clarence Bass discovered that he could look as good at 70 as he did much earlier and encourages readers to have the same great expectations for

themselves - at 30, 40, 50, 60, 70, and beyond. In *Great Expectations*, he provides both the example and the science to show that the body will keep responding to the demands of sensible training far longer than most people think possible. Vibrant health, fitness, and leanness are there for those who choose to train, eat, and live well. What's more, suffering is not required or even helpful. To be truly successful over the long term you must enjoy your diet and training. The details are in *Great Expectations*.

Russian and Soviet cinema occupies a unique place in the history of world cinema. Legendary filmmakers such as Sergei Eisenstein, Vsevolod Pudovkin, Dziga Vertov, Andrei Tarkovsky, and Sergei Paradjanov have created oeuvres that are being screened and studied all over the world. The Soviet film industry was different from others because its main criterion of success was not profit, but the ideological and aesthetic effect on the viewer. Another important feature is Soviet cinema's multinational (Eurasian) character: while Russian cinema was the largest, other national cinemas such as Georgian, Kazakh, and Ukrainian played a decisive role for Soviet cinema as a whole. The *Historical Dictionary of Russian and Soviet Cinema* provides a rich tapestry of factual information, together with detailed critical assessments of individual artistic accomplishments. This second edition of *Historical Dictionary of Russian and Soviet Cinema* contains a chronology, an

introduction, and a bibliography. The dictionary section has over 600 cross-referenced entries on directors, performers, cinematographers, composers, designers, producers, and studios. This book is an excellent access point for students, researchers, and anyone wanting to know more about Russian and Soviet Cinema.

This book is meant as a present to honor Professor on the th occasion of his 70 birthday. It collects refereed contributions from sixty-one mathematicians from eleven countries. They cover many different areas of research related to the work of Professor including Navier-Stokes equations, nonlinear elasticity, non-Newtonian fluids, regularity of solutions of parabolic and elliptic problems, operator theory and numerical methods. The realization of this book could not have been made possible without the generous support of Centro de Matemática Aplicada (CMA/IST) and Fundação Calouste Gulbenkian. Special thanks are due to Dr. Ulrych for the careful preparation of the final version of this book. Last but not

least, we wish to express our gratitude to Dr. for her invaluable assistance from the very beginning. This project could not have been successfully concluded without her enthusiasm and loving care for her father. On behalf of the editors ADÉLIA SEQUEIRA v honored by the Order of Merit of the Czech Republic by Václav Havel, President of the Czech Republic, on the October 28, 1998, Professor Emeritus of Mathematics at the Charles University in Prague, Presidential Research Professor at the Northern Illinois University and Doctor Honoris Causa at the Technical University of Dresden, has been enriching the Czech and world mathematics with his new ideas in the areas of partial differential equations, nonlinear functional analysis and applications of the both disciplines in continuum mechanics and hydrodynamics for more than forty years.

This book examines the societal dynamics of memory politics in Russia. Since Vladimir Putin became president, the Russian central government has increasingly actively employed cultural memory to claim political legitimacy and discredit all forms of political opposition. The rhetorical use of the past has become a defining characteristic of Russian politics, creating a historical foundation for the regime's emphasis on a strong state and centralised leadership. Exploring memory politics, this book analyses a wide range of actors, from the central government and the Russian Orthodox Church, to filmmaker and cultural heavyweight Nikita Mikhalkov and radical

thinkers such as Aleksandr Dugin. In addition, in view of the steady decline in media freedom since 2000, it critically examines the role of cinema and television in shaping and spreading these narratives. Thus, this book aims to gain a better understanding of the various means through which the Russian government practices its memory politics (e.g., the role of state media) and, on the other hand, to sufficiently value the existence of alternative and critical voices and criticism that existing studies tend to overlook. Contributing to current debates in the field of memory studies and of current affairs in Russia and Eastern Europe, this book will be of interest to scholars working in the fields of Russian Studies, Cultural Memory Studies, Nationalism and National Identity, Political Communication, Film, Television and Media Studies.

This book is mostly about worlds which already exist. This book represents an attempt to develop our vision so that we can see what is already here. And what seems to be here already is man's ability to construct the future, just as man's biological development has given him the capacity to construct his future. To the degree that he becomes conscious of this ability he will be able to gain control of those forces which already are shaping the future. Parts one and two sketch the basic framework of ideas on which this book rests. The subsequent parts focus on the fundamental topics within sociology. I attempt to apply these ideas to an analysis of the transition from industrial to post-industrial society. The fictional characters--Basil Kornish, Ben Zorn, Ian Zenski and Bart Khayyam--represent stages along this path from present to future.

The History of Telemedicine provides a comprehensive and in-depth analysis of

the evolution of telemedicine from ancient Greece to the present time. It places the development of this field in the context of the never ending quest for providing equitable access to health care and recasting the medical care landscape, while trying to assure quality and contain cost. The book describes the origin of modern telemedicine in experiments such as those by Willem Einthoven's 1905 long distance transfer of electrocardiograms through the pioneering era of teleradiology and telepsychiatry of the 1950s, its coming of age in the 1970s, its maturation in the 1990s, and finally the recent transformation and adoption by the mainstream. The authors delve into the rich history of telemedicine and tell the story from its genesis to the present time, reporting its continuity and evolution, its various adaptations, and the context that sustained interest and development in this modality of care and continues to guide its transformation into the future. The authors' central theme throughout the book is telemedicine's potential role in improving human health.
