Asian Yearbook of International Law, Volume 8 (1998-1999) Wolters Kluwer Law & Business

Navigational rights and freedoms have been central to the development of the law of the sea since the original debates over whether the seas were 'open' or 'closed' to maritime traffic. The 1982 UN Convention on the Law of the Sea recognises the legitimate rights of coastal states to proclaim sovereignty and assert jurisdiction over vast areas of maritime space. In return, maritime states are given a range of navigational rights over waters ranging from the territorial sea through to the high sea. The new regime of the law of the sea

created by the Convention presents an opportunity to review developments in the law of navigational rights and freedoms. This book assesses the navigational regime established by the 1982 Convention, with emphasis given to the continuing importance of the freedom of the seas. Navigation in the territorial sea and international straits is reviewed, especially in the Straits of Malacca and Singapore, and the Torres Strait. Archipelagic navigation from the perspective of two claimant states, Indonesia and the Philippines, and a user state, South Korea, is also considered. The interaction of environmental concerns with navigational rights is an important feature of the current law of the sea regime with relevant conventions assessed and the role of the

International Maritime Organization in developing navigational standards considered. Both European and Canadian practice in the protection of sensitive marine environments and the impact upon navigational rights is also considered. Finally, the roles of the International Tribunal for the Law of the Sea and the International Maritime Organization in dispute resolution are reviewed, before a concluding consideration of the future for navigational rights and freedoms in the twenty-first century.

This book assesses the environmental jurisdiction of coastal states over the seabed within and beyond 200 nautical miles from the baselines, thus mapping out coastal states' competencies to

regulate activities impacting the marine environment of the sea floor. In addition, it offers revealing insights into the domestic legal and policy framework of a particular State in this regard. As Brazil intends to exploit mineral resources farther away offshore, technologically backed by the recognised expertise of its state-owned oil company, Petrobras, questions arise as to the adequacy of the country's domestic legal framework to sustainably manage the immenseness of the "Brazilian Blue Amazon". This book critically evaluates the compatibility of Brazil's national policies and legislation with the Law of the Sea, as well as the country's legal and institutional preparedness to face the challenges of managing approximately 4,5 million km² of maritime spaces

under national jurisdiction.

The volume surveys and discusses the range of current issues arising in the law of the sea from an Asian-Pacific perspective. There have been major developments in the law of the sea in the region: many current controversies (e.g. over archipelagic sealanes passage, drift-net fishing and environmental management) have their origins, or important exemplars, in the region. The contributors include international lawyers, political scientists and government officials with expertise in the region. Particular aspects of the book which are of interest are: (a) its discussion of the perspectives of particular countries in the region (East

Asia, Australia, the Pacific Islands); (b) its focus on issues of the marine environment and fisheries, including drift-net fishing; (c) discussion of specific developments which are of general interest (the Torres Strait Treaty and its implementation, maritime-confidence-building measures, dispute resolution); and (d) an overview of issues relating to high seas freedoms, including in particular transit through straits and archipelagoes. There is a concluding essay by the editors summarizing the various trends.

This book places contemporary problems of ocean use management in historical context beginning with the time of Hugo Grotius, whose seminal 1609 work The Freedom of the Seas was the basis of ocean law for the next three centuries. Individual use problems are dealt with in detail and include overfishing, migrating fish stocks and fish wars, oil drilling,

deep sea mining and marine pollution. Throughout the author notes the need to seek solutions in ocean management from a more integrated perspective. Emphasis is placed on the United Nations Conference on the Law of the Sea and the resulting agreements. This book therefore presents a unique breadth of view which will make it salient to policy makers, diplomats, scholars and ocean users.

Encompasses Uniform Federal Law and the Unique Aspects of Maryland Law Even more than most areas of the law, elder law tends to be state specific. In Maryland, long-term medical care regulations, health care decision making, and guardianship are just a few of the areas in which state law cannot be subsumed in general statements of majority rules or hornbook law. Yet, at the same time, uniform federal law governs Social Security issues and

various consumer protection statutes and housing assistance programs. Elder Law in Maryland provides guidance to both applicable federal law and the unique aspects of Maryland elder law. Practical, Comprehensive Guidance for the Maryland Practitioner In a single, concise volume, Elder Law in Maryland accurately renders elder law as it currently exists in Maryland. It addresses the nexus between senior citizens and the law at those points most relevant to the legal practitioner specifically and to those serving seniors generally. Using this book as a guide, you can feel confident that you are considering all the options when planning for medical, financial, and quality of life decisions. In keeping with its practical focus, Elder Law in Maryland contains forms and

documents conforming to Maryland law,
texts of landmark cases, and checklists

of essential elements for both office and
courtroom.
