Knowledge Translation in Health Care Jones & Bartlett Learning

Annotation. "In this compelling title, two distinguished scholars share their experiences as expert witnesses in cases ranging from eyewitness testimony, person identification and recovered memories, to false confessions, collaborative storytelling and causal attribution, in the context of various interrogation techniques and their ability to deliver reliable results. Each chapter of *The Popular Policeman and Other Cases* describes in lucid, entertaining prose a representative case in the context of scholarly literature to date, showing how psychological expertise has been (and can be) used in a legal setting." "The cases include petty and serious crime, from illegal gambling, infringed trademarks and risqué courtship behaviour, to honour killing and death on the climbing wall. The authors' findings and recommendations apply to legal systems worldwide." "There is no other English-language textbook covering a similarly wide range of offences, and this volume will fill a gap in the existing literature and demonstrate how psychological expertise can be used in a much larger area than is often realised."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved.

Illinois State Licensed, Certified and Registered Occupations Academic Press

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. *Knowledge Translation in Health Care* explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

Marine Biotoxins and Seafood Poisoning Springer

Contains more than 470 practice questions and answers! The Health Services Executive (HSE) Q&A Exam Review provides a comprehensive and practical study tool for all students and professionals seeking HSE qualification. Divided into two parts, this resource allows readers to test their knowledge in each area covered by the HSE exam established by the National Association of Long-Term Care Administrator Boards (NAB). Part One chapters

feature multiple choice, single-best answer questions grouped by domain - Customer Care, Supports, and Services, Human Resources, Finance, Environment, and Management and Leadership - with detailed rationales accompanying each answer. Part Two simulates the Core Knowledge Exam and offers a separate exam for each of the three lines of service - Nursing Home Administration (NHA), Residential Care / Assisted Living (RC/AL), and Home and Community Based Service (HCBS). These exams are structured to model the content blueprint of the licensure exams and include answers with rationales separately for self-assessment and further learning. Written by leading experts in long-term care administration and containing over 470 questions with rationales, this Q&A review is the most authoritative and comprehensive in the market. It is a must-have resource for long-term care administrators, whether taking their initial licensure exam or completing the remaining lines of service exams. Key Features: Over 470 multiple choice, single-best answer questions with answers and detailed rationales Extensive coverage of the Health Service Executive (HSE) exam and the individual lines of service exams (NHA, RC/AL, HCBS) Written by leading experts and educators in long-term care administration and leadership Purchase includes digital access for use on most mobile devices or computers

Beyond the Shadowlands (Foreword by Walter Hooper) Univ of California Press

This book is a printed edition of the Special Issue "Precision Nutrition and Metabolic Syndrome Management" that was published in *Nutrients*

The Medical Directory ... Crossway

Today AIDS dominates the headlines. A century ago it was fears of syphilis epidemics. This book looks at how the spread of syphilis was linked to socio-economic transformation and land dispossession, migrancy and urbanisation disrupted social networks - factors similarly important in the AIDS crisis. Medical explanations of syphilis and state medical policy, however, were shaped by contemporary beliefs about race. Doctors drew on ideas from social Darwinism, eugenics, and social anthropology to explain the incidence of syphilis among poor whites and Africans, especially women, and to help define 'normal' and abnormal sexual behaviour for racial groups.

Pressure Vessel Handbook John Wiley & Sons

This book provides essential insights into Bhutan's developmental challenges. It analyzes and scrutinizes the sovereign state's developmental approach, including the idea of Gross National Happiness (GNH), which has replaced Gross National Product (GNP) as a measurement of prosperity. The authors also explore and deconstruct ideational and cultural aspects of knowledge production and present a critical overall assessment of the political economy of education policy, health, ICT and migration in Bhutan. The book is divided into five parts all taking a critical approach towards inequality: Part one offers an assessment of Bhutan's developmental trajectories; part two deals with GNH, equality and inclusion versus exclusion; part three is devoted to culture, legal issues and the politics of change; and part four to

governance and integration; section five addresses health, food and disparities. This book will appeal to all scholars of South Asian affairs and development studies, as well as to diplomats and professionals involved in development aid.

The Health Services Executive (Hse) Q&A Certification Elsevier Health Sciences

This eighty-ninth volume of the IARC Monographs is the third and last of a series on tobacco-related agents. Volume 83 reported on the carcinogenicity of tobacco smoke and involuntary smoking (second-hand smoke or environmental tobacco smoke) (IARC 2004a). Volume 85 summarized the evidence on the carcinogenic risk of chewing betel quid with and without tobacco (IARC 2004b). That volume explored the variety of products chewed in South Asia and other parts of the world that contain areca nut in combination with other ingredients, often including tobacco. In this eighty-ninth volume, the carcinogenic risks associated with the use of smokeless tobacco, including chewing tobacco and snuff, are considered in a first monograph. The second monograph reviews some tobacco-specific nitrosamines. These agents were evaluated earlier in Volume 37 of the Monographs (IARC 1985) and information gathered since that time has been summarized and evaluated.

Marine biotoxins may pose a threat to the human consumption of seafood and seafood products. The increasing global trade and higher demand for seafood products worldwide represents a challenge for food safety authorities, policy makers, food business operators, and the scientific community, in particular, researchers devoted to environmental sciences, toxicology, and analytical chemistry. In addition, due to changes in climate conditions and technological developments, new and emerging marine toxins are being detected in regions where they were previously unknown. This Special Issue highlights studies aiming to develop detection methods for marine biotoxins for better understanding the dynamics of accumulation/elimination of marine biotoxins and their effects on marine organisms, as well as toxin exposure studies that aim to evaluate the risks associated with the consumption of contaminated seafood.

Taking an Exposure History World Health Organization

The increasing need for trained and knowledgeable service providers to work with the aging has been well documented in recent studies. Gutheil writes in her introduction, growth in the number and proportion of older persons is one of the most dramatic and influential developments of this century, and we must anticipate and address the needs of this burgeoning older population. One anticipated result of the increasing numbers of older persons, especially the oldest old, is an unprecedented demand for support services for older people and their families. By bringing together practitioners and educators active in the field of elder care, this book examines current concerns and practice issues. Several topics now receiving considerable attention in the fields of aging and social work such as elder abuse, ethical issues in long-term care, the challenges of interdisciplinary teamwork, and the impact of our current economic environment on social agencies, are brought together for the first time in this volume. Timely chapters incorporate current thinking on concerns professionals struggle with on a daily basis. The chapters reflect the remarkable diversity of the challenges and opportunities in work with older people. Some of these challenges are frustrating, some invigorating - there are many opportunities for stimulating and gratifying practice. A valuable tool for both classroom use and for professionals in direct practice, the book contains two sections, the first provides foundation knowledge essential for work with older people and their families; the second examines current issues in the field of

aging. There are the kinds of complex issues that confront professionals in social work, gerontology, counseling, and other fields with a commitment to serving older people and their families.

British Journal of Venereal Diseases MDPI

Medical acronyms and abbreviations offer convenience, but those countless shortcuts can often be confusing. Now a part of the popular Dorland's suite of products, this reference features thousands of terms from across various medical specialties. Its alphabetical arrangement makes for quick reference, and expanded coverage of symbols ensures they are easier to find. Effective communication plays an important role in all medical settings, so turn to this trusted volume for nearly any medical abbreviation you might encounter. Symbols section makes it easier to locate unusual or seldom-used symbols. Convenient alphabetical format allows you to find the entry you need more intuitively. More than 90,000 entries and definitions. Many new and updated entries including terminology in expanding specialties, such as Nursing; Physical, Occupational, and Speech Therapies; Transcription and Coding; Computer and Technical Fields. New section on abbreviations to avoid, including Joint Commission abbreviations that are not to be used. Incorporates updates suggested by the Institute for Safe Medication Practices (ISMP).

The India Office and Burma Office List MDPI

This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and combinations of strategies.

The Colour of Disease Springer

Legal and Ethical Issues for Health Professionals, Fifth Edition is a concise and practical guide to legal and ethical dilemmas facing healthcare professionals in the real-world today. Thoroughly updated and featuring new case studies, this dynamic text will help students to better understand the issues they will face on the job and the implications in the legal arena. With contemporary topics, real-world examples, and accessible language, this comprehensive text offers students an applied perspective and the opportunity to develop critical thinking skills. Legal and Ethical Issues for Health Professionals provides an effective transition from the classroom to the reality of a clinical environment.

Bathing Without a Battle Springer Publishing Company

As we approach the thirtieth anniversary of *Roe v. Wade*, it's crucial to look back to the time when abortion was illegal. Leslie J. Reagan traces the practice and policing of abortion, which although illegal was nonetheless widely available, but always with threats for both doctor and patient. In a time when many young women don't even know that there was a period when abortion was a crime, this work offers chilling and vital lessons of importance to everyone. The linking of the words "abortion" and "crime" emphasizes the difficult and painful history that is the focus of Reagan's important book. Her study is the first to examine the entire period during which abortion was illegal in the United States, beginning in the mid-nineteenth century and ending with *Roe v. Wade* in 1973. Although illegal, millions of abortions were provided during these years to women of every class, race, and marital status. The experiences and perspectives of these women, as well as their physicians and midwives, are movingly portrayed here. Reagan traces the practice and policing of abortion. While abortions have been typically portrayed as

grim "back alley" operations, she finds that abortion providers often practiced openly and safely. Moreover, numerous physicians performed abortions, despite prohibitions by the state and the American Medical Association. Women often found cooperative practitioners, but prosecution, public humiliation, loss of privacy, and inferior medical care were a constant threat. Reagan's analysis of previously untapped sources, including inquest records and trial transcripts, shows the fragility of patient rights and raises provocative questions about the relationship between medicine and law. With the right to abortion again under attack in the United States, this book offers vital lessons for every American concerned with health care, civil liberties, and personal and sexual freedom.

A Computer Program Incorporating Pitzer's Equations for Calculation of Geochemical Reactions in Brines Amsterdam University Press

Those who know Lewis's work will enjoy Martindale's thorough examination of the powerful images of Heaven and Hell found in Lewis's fiction, and all readers can appreciate Martindale's scholarly yet accessible tone. Read this book, and you will see afresh the wonder of what lies beyond the Shadowlands.

The Church of England Yearbook Springer

Chikungunya and Zika Viruses: Global Emerging Health Threats is the go-to resource for both historical and current information on this important virus that is rapidly increasing its global range. Epidemics since 2005 have spread from Africa and Asia, and through Europe, and an ongoing epidemic has caused nearly two million cases in the Americas. It causes severe crippling arthritis, with symptoms lasting for months or years. As no vaccine or treatment is available, there is international interest in the virus, thus funding opportunities for research have dramatically increased. This book presents our understanding of the virus, bringing comprehensive knowledge in a single source. Provides a comprehensive collection of the state-of-the-art on CHIKV biology in a go-to reference book Edited by leaders in the field who provide a single, up-to-date source of information Gives a better understanding of the transmission and spread of chikungunya virus, a clear, coherent description of the outcomes of infection (both acute and chronic), and its biology and risk factors Pulls relevant background information to justify projects of many professionals developing vaccines and mosquito vector control approaches

Metabolic Engineering Createspace Independent Publishing Platform

Metabolic engineering is a rapidly evolving field that is being applied for the optimization of many different industrial processes. In this issue of *Advances in Biochemical Engineering/Biotechnology*, developments in different areas of metabolic engineering are reviewed. The contributions discuss the application of metabolic engineering in the improvement of yield and productivity - illustrated by amino acid production and the production of novel compounds - in the production of polyketides and extension of the substrate range - and in the engineering of *S. cerevisiae* for xylose metabolism, and the improvement of a complex biotransformation process.

National Trade and Professional Associations of the United States

2008 AJN Book of the Year Winner! Like its popular predecessor, the new edition of *Bathing Without a Battle* presents an individualized, problem-solving approach to bathing and personal care of individuals with dementia. On the basis of extensive original research and clinical experience, the editors have developed strategies and techniques that work in both institution and home settings. Their approach is also appropriate for caregiving activities other than bathing, such as morning and evening care, and for frail elders not suffering from dementia. For this second edition, the authors have included historical material on bathing and substantially updated the section on special concerns, including: Pain Skin care Determining the appropriate level of assistance Transfers The environment An enhanced final section addresses ways to support caregivers by increasing their understanding of the care recipient's needs and their knowledge of interventions to improve care and comfort. It also emphasizes self-care and system-level changes to promote person-directed care. Several chapters include specific insights and wisdom from direct caregivers.

When Abortion Was a Crime

This toxicological profile is prepared in accordance with guidelines developed by the Agency for Toxic Substances and Disease Registry (ATSDR) and the Environmental Protection Agency (EPA). The original guidelines were published in the Federal Register on April 17, 1987. Each profile will be revised and republished as necessary. The ATSDR toxicological profile succinctly characterizes the toxicologic and adverse health effects information for the toxic substances each profile describes. Each peer-reviewed profile identifies and reviews the key literature that describes a substance's toxicologic properties. Other pertinent literature is also presented but is described in less detail than the key studies. The profile is not intended to be an exhaustive document; however, more comprehensive sources of specialty information are referenced. The profiles focus on health and toxicologic information; therefore, each toxicological profile begins with a public health statement that describes, in nontechnical language, a substance's relevant toxicological properties. Following the public health statement is information concerning levels of significant human exposure and, where known, significant health effects. A health effects summary describes the adequacy of information to determine a substance's health effects. ATSDR identifies data needs that are significant to protection of public health. Each profile: (A) Examines, summarizes, and interprets available toxicologic information and epidemiologic evaluations on a toxic substance to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects; (B) Determines whether adequate information on the health effects of each substance is available or being developed to determine levels of exposure that present a significant risk to human health of acute, subacute, and chronic health effects; and (C) Where appropriate, identifies toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans.
