 Dealing with ethical and forensic issues, this book is authored by active duty psychiatrists and psychologists from the Army, Navy, Air Force, as well as civilians from within and outside of the Department of Defense. Ethical issues will refer to areas in which basic principles are in play: autonomy, justice, beneficence, and nonmaleficence. Forensic issues will refer to the intersection of military mental health issues and the law. Chapter topics include training about forensic issues, a legal overview of confidentiality and reporting of military behavioral health records, sanitary board

evaluations, updates on disability proceedings, forensic psychological testing, death investigations and psychological autopsies, epidemiological consultation team findings, mitigation of risk and means restriction, psychiatric assistance in capital cases, posttraumatic stress disorder, substance abuse, rape and sexual trauma, suicide, and violence. Emerging subjects covered include behavioral science consultation teams and mefloquine and neurotoxicity.

 In *Live Wire*, Francine Moccio brings to life forty years of public policy reform and advocacy that have failed to eliminate

restricted opportunities for women in highly paid, skilled blue-collar jobs. Breaking barriers into a male-only occupation and trade, women electricians have found career opportunities in nontraditional work. Yet their efforts to achieve gender equality have also collided with the prejudice and fraternal values of brotherhood and factors that have ultimately derailed women's full inclusion. By drawing instructive comparisons of women's entrance into the electricians' trade and its union with those of black and other minority men, Moccio's in-depth case study brings new insights into the ways in which divisions at work along the lines of race, gender, and

economic background enhance and/or inhibit inclusion. Incorporating research based on extensive primary, secondary, and archival resources, *Live Wire* contributes a much-needed examination of how sex segregation is reproduced in blue-collar occupations, while also scrutinizing the complex interactions of work, unions, leisure, and family life.

Securing the Outdoor Construction Site: Strategy, Prevention, and Mitigation offers a holistic view of security planning for vulnerable capital projects, providing the strategic and tactical plans needed to protect large areas with a minimum investment in personnel and equipment. This book is a one-stop reference that provides effective security strategies, methods, and tactics to mitigate the theft of equipment and how to avoid these incidents

altogether. In addition, the book outlines the true costs of construction site theft to organizations in terms of lost time, equipment, and brand reputation, along with increased insurance premiums and danger to personnel. It lists the types of theft that regularly occur at sites, explores their underlying causes, and documents their worldwide financial significance. Finally, readers will learn how to conduct a construction site survey with loss prevention in mind, and how to budget for the unexpected. Provides complete guidelines for implementing a loss prevention program for any large outdoor construction project Offers proven

strategies for minimizing capital loss and costly delays using a minimum number of personnel and security technologies

Demonstrates how to develop proactive partnerships with law enforcement to stop theft before it occurs

Includes the latest data on outdoor construction theft and its impact

Draws on case studies and examples from around the world

Research institutions have or are planning to build, expand and renovate animal research facilities to keep up with the demands of biomedical research caused in part by growth in the use of genetically altered

rodents and the upsurge of research in infectious diseases.

Properly designed facilities greatly facilitate effective management and high-quality day-to-day animal care that is required to optimally support animal research and testing.

There are multiple solutions to address the myriad of factors that influence the design and construction of animal research facilities.

There is no “best design applicable for all facilities and arguably not even a single “best design for a given facility. For this reason, Planning and Designing Research Animal Facilities is not intended to be a “how to book. The goal is to cover the basic programmatic

requirements of animal research facilities, provide ideas for meeting those requirements while, hopefully, stimulating the creative process in which designers in consultation with those who work in animal research facilities generate even better ideas. That is how progress has been made and will continue to be made. Facilitates communication between the parties involved in planning and designing animal facilities by providing contemporary information, and stimulating creativity that will help lead to wise decisions and advance the knowledge base for planning, design and constructing animal research facilities

Crime in the Streets and Crime in the Suites

Introducing the Quality of Protection Modeling Language (QoP-ML), this book provides for the abstraction of security systems while maintaining emphasis on the details of quality protection . It delineates the steps used in cryptographic protocol and introduces a multilevel protocol analysis that expands current

understanding. Every operation defined by QoP-ML is described within parameters of security metrics, therefore evaluating the impact of the operation on the entire system's security.

"It goes a long way in mapping out the

agenda for health and safety professionals in this most dangerous and populous industry." Annals of Occupational Hygiene, Derby, United Kingdom

Changes in working practices and conditions in the construction industry over the past decade have meant that the competent authorities, health and safety committees, management or employers' and workers' organizations, in particular, should take a fresh look at such aspects as the safety of workplaces, health hazards, and construction equipment and machinery. This code

of practice takes account of new areas in the sector which require improved health and safety practices and other protective measures.
