The Internet, globalization, and hypercompetition are dramatically reshaping markets and changing the way business is done. The problem, says internationally renowned marketer Philip Kotler and his coauthors Dipak C. Jain and Suvit Maesincee, is that marketing has not kept pace with the markets. In today's world, customers are scarce-not products-and classic marketing needs to be deconstructed, redefined, and broadened to reflect this new reality. Marketing Moves describes the next transformational imperative for marketing-and for any organization competing in our customer-ruled, technology-driven marketplace. It calls for a fundamental rethinking of corporate strategy to enable the ongoing creation and delivery of superior value for customers in both the marketplace and the marketspace. And it appoints marketing as the lead driver in shaping and implementing this new strategy. The means for accomplishing this lies in a radically new marketing paradigm the

authors call holistic marketing -a dynamic concept derived from the electronic connectivity and interactivity among companies, customers, and collaborators. This new paradigm combines the best of traditional marketing with new digital capabilities to build long-term, mutually satisfying relationships and co-prosperity among all key stakeholders. Outlining a framework for implementing holistic marketing that calls for integrating customer demand management, internal and external resource allocation, and network collaboration-the authors show how holistic marketing can enable companies to: - Identify new value opportunities for renewing their markets - Efficiently create the most promising new value offerings - Deliver products, services, and experiences that more precisely match individual customer requirements - Consistently operate at the highest level of product quality, service, and speed Thought-provoking and practical, Marketing Moves shows how to build a complete marketing platform primed for the challenges and opportunities of a customer-centric world. AUTHORBIO: Philip Kotler is the S.C. Johnson Son Distinguished Professor of International Marketing at the Kellogg Graduate School of Management at Northwestern University in Chicago. Dipak C. Jain is Dean of the Kellogg Graduate School of Management. Suvit Maesincee is a Professor of Marketing at the Sasin Graduate Institute of Business Administration at Chulalongkorn University in Bangkok, Thailand.

This book discusses the pressing demand for novel and potential microorganisms to support an environment-friendly and cost-effective way of stress management in the plants. The

book summarizes the processes and mechanisms involved in microbe-assisted plant and soil stress management. It discusses the challenges and opportunities in the application of microbial interactions in plant health. It describes in detail the nutrient dynamics of different soil systems. It includes important topics like agriculturally important genes and enzymes, rhizosphere modeling & engineering, genetically engineered bio-inoculants etc. It also talks about the application of next-generation technologies, omics and nano-based technologies. In the recent years, more than 50% of agricultural production relies on chemical fertilizers, leading to serious health issues and environmental concerns. The Wish (A Roald Dahl Short Story) St. Martin's Press

This sumptuously illustrated volume analyzes artists' representations of angels and demons and heaven and hell from the Judeo-Christian tradition and describes how these artistic portrayals evolved over time. As with other books in the Guide to Imagery series, the goal of this volume is to help contemporary art enthusiasts decode the symbolic meanings in the great masterworks of Western Art. The first chapter traces the development of images of the Creation and the Afterworld from descriptions of them in the Scriptures through their evolution in later literary and philosophical works. The following two chapters examine artists' depictions of the two paths that humans may take, the path of evil or the path of salvation, and the punishments or rewards found on each. A chapter on the Judgment Day and the end of the world explores portrayals of the mysterious worlds between life and death and in the afterlife. Finally, the author looks at images of angelic and demonic beings themselves and how they came to be portrayed with the physical attributes--wings, halos, horns, and cloven hooves--with which we are now so familiar. Thoroughly researched by and expert in the field of iconography, *Angels and Demons in Art* will delight readers with an interest in art or religious symbolism.

Annotation "The book is intended for applied researchers and students who may not have quantitative backgrounds. Readers will learn how to measure effect size on continuous or dichotomous outcomes in comparative studies with independent or dependent samples. They will also learn how to calculate and correctly interpret confidence intervals for effect sizes. Numerous research examples from a wide range of areas illustrate how to apply these principles and how to estimate substantive significance instead of just statistical significance. Additional alternatives to statistical tests are described, including meta-analysis, resampling techniques like bootstrapping, and Bayesian estimation."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
