Joining the debate about the role of scholarship and research at American universities, this book examines such issues as postmodern concepts of scholarship, the impact of technology on scholarship, and the promoting of grant writing and scholarly publishing. Challenging the ideal of pure research and atheoretical teaching, contributors debate the impact of research-based graduate study and its faith in pure research on American scholarship, demonstrating how postmodern theories and social and

economic problems are exploding the myth of disinterested research. The book also analyzes how academics could grapple with social, political, moral, and pedagogical issues, considers the impact of online databases and electronic journals, and explores the changes that could help faculty find their voices as scholars.

A trailblazer in Native American linguistics and anthropology, Gladys Reichard (1893–1955) is one of America’s least appreciated anthropologists. Her accomplishments were obscured in her lifetime by differences in intellectual approach and envy, as well as academic politics and the gender realities of her age. This biography offers the first full account of Reichard’s life, her milieu, and, most importantly, her work—establishing, once and for all, her lasting significance in the history of anthropology. In her thirty-two years as the founder and head of Barnard College’s groundbreaking anthropology department, Reichard taught that Native languages, written or unwritten, sacred or profane, offered Euro-Americans the least distorted views onto the inner life of North America’s first peoples. This unique approach put her at odds with anthropologists such as Edward Sapir, leader of the structuralist movement in American linguistics. Similarly, Reichard’s focus on Native psychology as revealed to her by Native artists and storytellers produced a dramatically different style of ethnography from that of Margaret Mead,

who relied on western psychological archetypes to “crack” alien cultural codes, often at a distance. Despite intense pressure from her peers to conform to their theories, Reichard held firm to her humanitarian principles and methods; the result, as Nancy Mattina makes clear, was pathbreaking work in the ethnography of ritual and mythology; Wiyot, Coeur d’Alene, and Navajo linguistics; folk art, gender, and language—amplified by an exceptional career of teaching, editing, publishing, and mentoring. Drawing on Reichard’s own writings and correspondence, this book provides an intimate picture of her small-town upbringing, the professional challenges she faced in male-centered institutions, and her quietly revolutionary contributions to anthropology. Gladys Reichard emerges as she lived and worked—a far-sighted, self-reliant humanist sustained in turbulent times by the generous, egalitarian spirit that called her yearly to the far corners of the American West. This book is a scientifically current, integrative, and practical guide for understanding clinical hypnosis and its place within a new health care paradigm. Blending four original short stories with a treatise, it alternates narrative prose with health science discourse to create a framework for embracing systemic emotional and relational elements that lie beyond diagnosis, medication, surgery, and psychotherapy. Following the stories of four characters, the authors establish an empirically-grounded conceptualization of the mind, then demonstrate how practical applications of therapeutic hypnosis can help readers use individual and family resources in health and healing. Clinicians will learn to improve their care by embracing emotional, relational, and narrative elements that powerfully affect health beyond diagnosis, medication, surgery, and psychotherapy. Further, health care educators and policy makers will find inspiration that enriches

professional training.

First authoritative and comprehensive study in the field of Inkblot Personality Test, this book describes the historical roots of the three major projective inkblot measures: the Rorschach, the Holtzman Inkblot Technique (HIT) and the Somatic Inkblot Series (SIS). It presents the extensive psychometric background work accompanying the normative data and

diagnostic indicators along with indices for selecting executives in a business organization. The book begins with a detailed history of Hermann Rorschach and his early experiments with inkblots in the diagnosis of mentally ill patients. Special attention is given to the administration and scoring of the Rorschach, with the sections detailing the systems developed by Klopfer and Exner. The HIT and SIS are also reviewed in detail, emphasizing their psychometric qualities.

"Much of today's writing about spirituality is loaded with nonsense. Often it consists of little more than wild speculation, shoddy reasoning, and the repetition of a few stale truisms. A very small number of writers and editors have climbed above this morass to combine spiritual depth with intellectual acumen and literary polish. Mitch Horowitz is one of them."—Richard Smoley, *New Dawn Magazine*
