L'arbre des possibles
University of Michigan Press

The year is 1915, and Benjamin Corvet, founder of the ship-owning firm Corvet, Sherrill and Spearman, suddenly disappears, sparking events and questions that baffle even those who are close to him.

Constance Sherrill, an attractive, sheltered young woman, feels strangely responsible for what may have happened to him---her father's best friend and coworker. Alan Conrad arrives in Chicago searching for his identity and an unknown benefactor and is swept into a maelstrom of mystery and intrigue that tests his intelligence and athleticism to the fullest. Henry

Spearman, the firm's junior partner, is the most eligible bachelor along Chicago's Lake Shore Drive as a result of his catapult from ships' ranks to successful owner.

When a ship sinks off the coast of Beaver Island in Michigan, the intertwining lives of these characters unlock the mystery of the disappearance of another ship twenty years earlier, in a riveting whodunit set on the stormy waters of the Great Lakes.

Donald A. Johnston was born and raised in Detroit, served in World War II as a U.S. Navy Reserve officer, and was decorated for service in the Philippines and in the invasions of Iwo Jima and Okinawa. His career includes forty years in the insurance

business. An ardent sailing enthusiast, he has cruised the Great Lakes extensively and has sailed winners in class boats and in offshore competition. Jacket photograph © Yuriz / iStockphoto.com

The Singularity School and Conference took place in Luminy, Marseille, from January 24th to February 25th 2005. More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory. The volume contains the elementary and advanced courses conducted by singularities specialists during the conference,

general lectures on singularity theory, and lectures on applications of the theory to various domains. The subjects range from geometry and topology of singularities, through real and complex singularities, to applications of singularities.

S[an]ta Barbara, [Calif.] : Printed by the author at the signe of the crossed quills Des fresques de l'Antiquité romaine aux pavages de Durer et Kepler, des mosaïques de l'art arabo-persan aux pavages de Penrose, l'art décoratif est illuminé de motifs géométriques foisonnants. Soumis à des régularités lancinantes ou à des symétries kaléidoscopiques, ils forment un trait d'union privilégié entre l'art et les

mathématiques. S'adressant aux enseignants et étudiants en mathématiques ou informatique comme aux amateurs d'art, Géométrie des pavages propose différentes clés permettant de mieux comprendre la beauté cachée des formes, mais également de devenir les artisans constructeurs des pavages sur ordinateur. Il détaille les trois types de conception géométrique (surface plane, sphérique ou géométrie non euclidienne hyperbolique) et les concepts théoriques qui les fondent. La compréhension des mécanismes internes de la fabrication des pavages permet ainsi d'accéder aux

programmes de réalisation sur ordinateur, donnant accès à des visualisations instantanées et à un grand nombre de variations possibles. Genie Civil Editions De L'Ecole

Introduction À

L'Histoire Du Buddisme Indien Birkhäuser

Vingt petites histoires sous forme de contes, de légendes, de mini polars. Bernard Werber nous offre avec L'Arbre des possibles des récits fantastiques où les dieux vont à l'école pour apprendre à gouverner les peuples, où les objets sont soudainement remplacés par leurs noms, où les gens ne savent compter que jusqu'à 20, où l'on part en vacances au XVIIe

siècle sans oublier de se faire vacciner contre la peste...

Foisonnement d'idées poétiques, de décors grandioses, de personnages drôles et truculents, ce livre révèle un nouvel aspect de l'œuvre de l'auteur des Fourmis et de L'Empire des anges.
